

Math Goals for Next Year — Setting the Course

Base Sheet

Activity Sheet

The child reflects on their mathematical journey and sets goals for next year. They identify what they have mastered, what they want to strengthen, and what new concepts excite them.

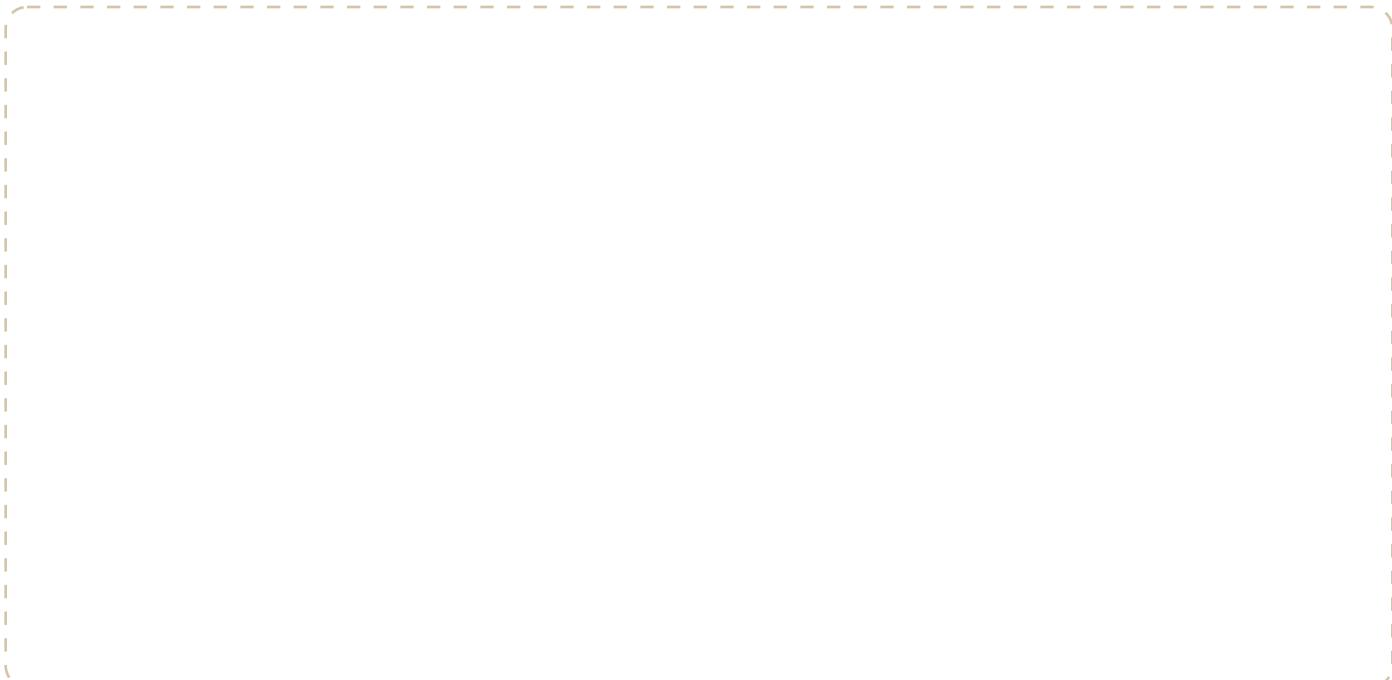

What You Need:

- Paper for goals
- Pencil
- Colored pencils for decorating
- Math materials for reference

Steps:

1. 'You have learned so much math! Let's think about what comes NEXT.'
2. Review the year's progression: counting, quantities, operations, fractions, geometry, patterns.
3. What math feels EASY now? What still feels challenging? Both are good to know!
4. In elementary math, you will learn: bigger multiplication, long division, more fractions, decimals, and even some algebra!
5. What sounds most exciting to you?
6. Write 3 math goals: one to maintain, one to strengthen, one to explore.
7. 'You are a mathematician. These goals will guide you into next year.'

Work Space:

A large, dashed rectangular box occupies the bottom half of the page, intended for the child to write their answers or draw their goals.

Montessori Homeschool • Print on US Letter (8.5 x 11") • Activity sheet — print on standard paper
